

# 1082 A R

## Increased Security

## Enhanced Experience

Developed solely for Mil-Spec AR/M4 type weapons, the 1082-AR builds on the already proven 1082 making it the strongest and most versatile weapon rack available.

\*Not compatible with B.A.D. Levers

### Standard Features:

\*AR Retention Post

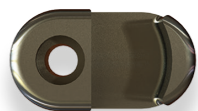

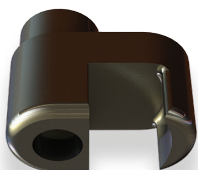

Cold Wire® Technology

Take-Down Pin Protection

Non-Marring Rubber Padding

No Interference with Rail Mounted Accessories or optics

Internal 8-Second Unlocking Timer

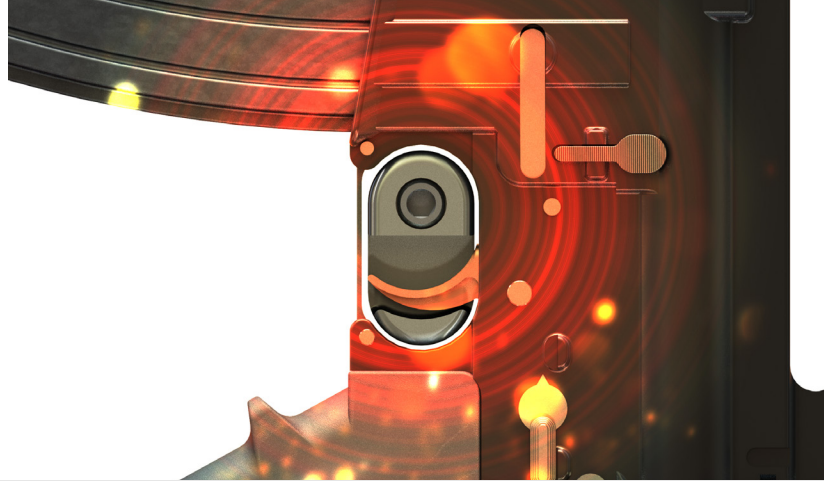

\*Patent Pending

# BLAC-RAC

WEAPON RETENTION SYSTEMS

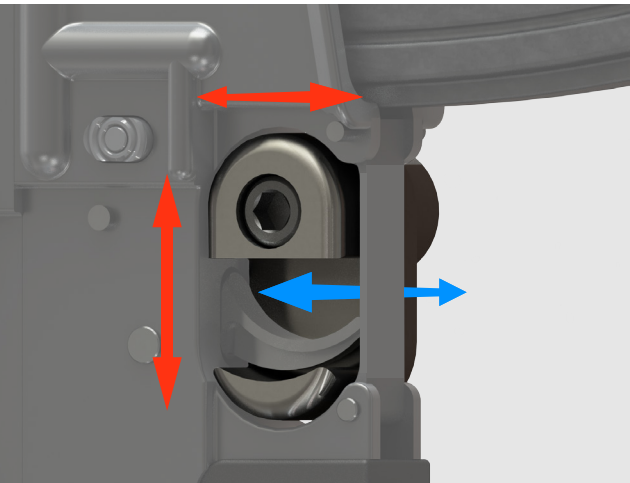

# Heightened Protection

The 1082-AR's improved \*Retention Post protects against theft by transferring force exerted by pulling or yanking to the weapon's lower receiver and away from the trigger guard. This places stress in locations which are less likely to fail.

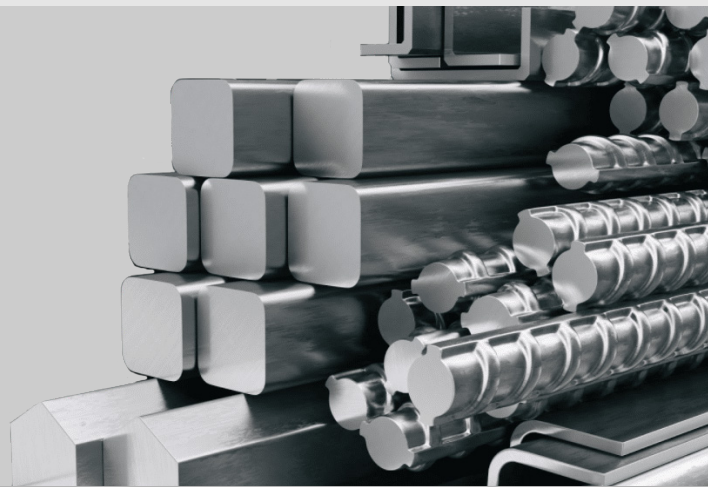

## Increased Safety

The intrinsic design protects the trigger during placement and removal of the weapon. This reduces the chance of an accidental discharge if a loaded weapon is inadvertently placed in the rack.

## Unparalleled Strength

Machined from a solid billet of 304 SS, the new AR Retention Post provides incredible strength, corrosion resistance, and coupled with a smooth finish, guarantees unimpeded removal of weapon.

## Simple Upgrade

Designed specifically for Mil-Spec AR/M4 lower receivers, the AR Retention Post comes standard on the 1082-AR. It is available for purchase separately as an upgrade kit [P/N: 25000+] for all 1080/1082's currently in use. The AR post utilizes the same bolt and mounting position allowing for easy installation in the field.

\*Patent Pending
